Cold Rinse & Filter Taps

Newform compact Filter and Cold Rinse taps are a really useful addition to the kitchen. They are reduced in scale to the normal kitchen taps and should be fitted as a secondary tap in the kitchen.

The Filter taps operate by passing the mains cold water through a 5-micron activated carbon filter resulting in substantially improved water taste. As water passes through the filtration system it re-polarises and when used in household appliances such as kettles and irons can help reduce lime scale build up. The Filter taps are extremely easy to fit and come supplied with all necessary connections to the water supply. The filter should be replaced approximately every 6 months for a family of five. Capacity 5600 litres/1500 gallons.

Cold Rinse taps are ideally used as a secondary tap in the kitchen for food preparation or simply filling the kettle.

**Clearwater Ref. POS**
April Pull-out Cold Rinse
Chrome £79
Brushed Steel £89

Min. 0.5 bar pressure required
Max. 2.0 bar
Pull-out hose length 900mm

A twist of the Swich will transform your kitchen tap, new or old, into a filtered water tap delivering a constant supply of crystal clear filtered water for all the family to enjoy.

For the first time, you are not restricted in the style of tap you can have in your kitchen. The addition of the Swich water filter diverter will allow you to simply and quickly convert any manufacturer’s kitchen tap to supply filtered water, improving the overall taste, appearance and quality of your drinking water without the need to compromise on style.

The Swich is designed to be installed in the maximum number of positions on your sink and worktops. It can be fitted in the blanking plug hole on your sink, or in a variety of positions within the vicinity of your kitchen tap or sink.

Filter Facts

The Switch and the Filter Taps shown on these pages use the same filtering principles; standard tap water passing over the 5-micron activated carbon filter reduces chlorine levels and removes sediment, dirt, dissolved metals and rust resulting in a substantially improved water taste.

As water passes through the filtration system it re-polarises and when used in household appliances such as kettles and irons can help reduce limescale build up.

Aquifier filters are extremely simple to install and replace with a service interval of up to 6 months for a family of five. Capacity 5600 litres / 1500 gallons.

The BRITA filter can be installed horizontally or vertically.

Great tasting water, compare the price against bottled water.

Three-way quarter turn technology.

Now you can enjoy the great taste of BRITA filtered water straight from the tap. Thanks to the unique BRITA cartridge fitted under the sink, the new range of BRITA / Pegler water filter taps can give you an unlimited supply of great tasting water, instantly reducing hardness, chlorine and impurities.

Each cartridge delivers 500 litres of filtered water at a fraction of the cost of bottled water - with a big saving on plastic, too.

All Brita/Pegler filter taps feature a handy traffic light system on the taps that tells you when to change the cartridge. And changing couldn’t be easier, taking just seconds to unscrew the old cartridge and replace it with a new one.

Cartridge life: 500 litres.

Replacement cartridges are supplied direct from Brita Approximate cost £35 each.
Hot Water Taps

Once you have one, you’ll wonder how you ever did without it. No kettles, no leads, no clutter, no fuss... Just 98° C of steaming hot and cold filtered water at the flick of a lever. With their elegantly sleek lines, InsinkErator models don’t just bring style to the kitchen; they bring a level of convenience that fits today’s busy lifestyles.

The GN1100 model produces hot filtered water, while the HC1100 offers both hot and cold filtered water from the same tap. Both feature an unobtrusive filter system under the sink that reduces chlorine, lead, turbidity and other unpleasant tastes and odours.

They only heat the water you use, making the household more energy efficient. The HC1100 tap with the added cold filtered water feature provides a cost effective alternative to buying bottled water.

Specifications

Capacity: Dispenses 100 cups of hot water per hour
Thermostat: Adjustable from 88°C to 98°C (factory preset 96°C)
Hot valve: Instant self-closing
Cold valve: Manual return
